

# DVD Surround Facilities

## DVD Authoring and Mastering

With several years experience in creating DVD Video titles using industry standard video encoding hardware and the best authoring software available, DVD Surround Facilities ensures results of the finest quality and of the highest technical level. Our skilled and enterprising staff have been taking very good care of the creative process over the years, and DVD Surround Facilities has now been responsible for thousands of DVD Video projects, from the straightforward to the breathtakingly complex.

## Video Editing

As part of the "all-in-one" package philosophy, our video editors have wide ranging experience and can manage anything from the simpler projects to the very elaborate edits. And, whether the work is coordinated by a producer or carried out autonomously, the results are always of the highest quality.

## Graphic Design & Animation

From vividly animated DVD menus through to packaging and promotional material, our artwork is always inspired by our client's vision and goals. Extremely high and efficient standards in artwork preparation ensures a high quality output whilst keeping costs down.

## Surround Sound Mixing & Mastering

We don't have "Surround" in our name for nothing! Together with audio restoration, mixing and effects processing, mastering is available in configurations up to 7.1. We take enormous pride in our upmixes from stereo to surround, which are often preferred to dedicated surround mixes by the general public. We encode to Dolby Pro Logic, Dolby Digital and DTS through the highest quality encoders on the market.

## Audio & Video encoding

Apart from the formats usually associated with DVD, we also offer high speed restoration, encoding and format conversion for almost any audio or video format available, in all resolutions. From encoding video files for iPod to broadcast grade PAL to NTSC (v.v.) conversion, anything is possible.

## Concept Development

With thousands of hours of owned footage and music (which can also be made available for licensing), we never run out of material for any conceivable project.

Our resourceful and helpful team will assist you along the way in creating anything from short corporate presentations to entire DVD box sets, including research, development, design and production.

## Dubbing, Synchronisation & Subtitling

By working with partners in broadcast, recording and theatrical production, we are able to take care of translation and dubbing, production of soundtracks and subtitling of productions in most languages.

## Karaoke Video Production

Karaoke video remains very popular. We provide karaoke synchronisation and video output in most formats, for use on DVD, CD+G, iPod and many other media formats.
